NEW ECO-COMPACT CITIES FOR THE WORLD THAT EMERGES FROM THE CRISIS

The world that emerges from the most serious economic crisis since 1929 needs cities radically different from those of the past century based upon automobile and sprawl. The new urban policy carried out by President Barack Obama is clear about that.

The new cities should be ecologically conceived, compact, and efficient.
No more skyscrapers floating in a desert of car-parking.
No more suburbs that consume our precious countryside.
No more polluting commercial malls.
No more sprawl that creates a territory impossible to manage, degraded, and unsafe.
New Eco-Efficient Cities will be based upon compactness, mixed-use, retail, pedestrian accessibility, and an efficient system of public transportation.

To answer this challenging issue, A VISION OF EUROPE presents the 5th edition of Bologna's International Triennale Exhibition of Architecture and Urbanism. Triennale V includes:

- an international exhibition featuring 88 new towns, cities, urban neighborhoods, districts, villages selected by the 2008 European Prize Philippe Rotthier;
- an international conference with more than 100 architects, urban planners, public and private administrators from all over the world;
- the publication of *A GUIDE TO ECO-EFFICIENT CITIES* as a fundamental tool for professionals, administrators, and citizens who are willing to design and build according to a true sustainable development.

Among the Eco-Efficient Cities presented at Triennale V, the new urban center at Plessis Robinson awarded the first prize at the European Prize Philippe Rotthier 2008. The most successful case in the Paris metropolitan region of a "hard banlieue" re-generated through the demolition of some 2,400 housing units built in the 1960s and 70s and the construction of a new Eco-garden City conceived according to the principles of the sustainable development.

Triennale V will serve as a venue for the launch of ECCN, the first international network of Eco-Compact Cities. A network chaired by Honorable Philippe Pemezec, the former presenter of the Borloo Law on the Environment at the French Parliament and Mayor of Plessis Robinson.
